# Switch Statement 

Hui Chen
Department of Computer \& Information Science Brooklyn College

## Objectives

- To implement selection control using switch statements (§3.13)

## Outline

- Discussed
- Boolean data type and Boolean expressions
- If-statements (one-way, two-way, multi-way, and nested ifstatements) and their flow charts
- Common errors and pitfalls
- 3 ("big") programming problems (subtraction quiz, compute BMI, compute taxes)
- Logical operators and two more ("big") programming problems (LeapYear, Lottery)
- Switch statement

## Switch Statement

switch (status) \{
case 0 : compute taxes for single filers;
break;
case 1: compute taxes for married file jointly;
break;
case 2: compute taxes for married file separately; break;
case 3: compute taxes for head of household; break;
default: System.out.println("Errors: invalid status");
System.exit(1);
\}

## Flow Chart of Switch Statement

## Rules

The switch-expression must yield a value of char, byte, short, or int type and must always be enclosed in parentheses.

The value1, ..., and valueN must have the same data type as the value of the switch-expression. The resulting statements in the case statement are executed when the value in the case statement matches the value of the switch-
 expression. Note that value,$\ldots$, and valueN are constant expressions, meaning that they cannot contain variables in the expression, such as $1+\underline{\mathrm{x}}$.

## The break Statement

The keyword break is optional, but it should be used at the end of each case in order to terminate the remainder of the switch statement. If the break statement is not present, the next case statement will be executed.

The default case, which is optional, can be used to perform actions when none of the specified cases matches the switch-expression.
switch (switch-expression) \{

$\longrightarrow$ default: statement(s)-for-default; \}

When the value in a case statement matches the value of the switch-expression, the statements starting from this case are executed until either a break statement or the end of the switch statement is reached.

## Programming Problem. Display

## Chinese Zodiac

- Write a program that prompts the user to enter a year and displays the animal for the year.

## Questions?
