

# Array Processing – Part III: Copying Arrays

Hui Chen

Department of Computer & Information Science  
Brooklyn College

# Objectives

- To copy contents from one array to another (§7.5)

# Copying Arrays

- Often, in a program, you need to duplicate an array or a part of an array.
- How?

# How about this?

```
list2 = list1;
```

# How about this?

`list2 = list1;`

*Before* the assignment

```
list2 = list1;
```

`list1` →

Contents  
of `list1`

`list2` →

Contents  
of `list2`

*After* the assignment

```
list2 = list1;
```

`list1` →

Contents  
of `list1`

`list2`

Contents  
of `list2`

# Copying Arrays Using Loop

- Using a loop:

```
int[] sourceArray = {2, 3, 1, 5, 10};
```

```
int[] targetArray = new int[sourceArray.length];
```

```
for (int i = 0; i < sourceArray.length; i++) {  
    targetArray[i] = sourceArray[i];  
}
```

# Copying Arrays Using System.arraycopy

- The System.arraycopy method

```
arraycopy(sourceArray, src_pos, targetArray, tar_pos,  
length);
```

- Example:

```
System.arraycopy(sourceArray, 0, targetArray, 0,  
sourceArray.length);
```
